

Keep Payments Flowing Without the Follow-Up

Fortis

Reduce declines and recover revenue caused by expired, replaced, or reissued cards.

How Card Account Updater (CAU) works

A patient's card changes due to expiration, replacement, or reissue

Card networks securely provide updated account details

Fortis automatically updates the stored payment method

Why enable CAU?

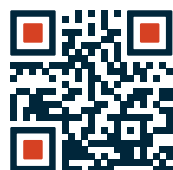

- Automatically update stored payment information
- Reduce declined recurring payments
- Recover revenue that might otherwise be lost
- Improve the patient payment experience
- Keep memberships and payment plans running smoothly
- Reduce manual staff follow-up
- Avoid awkward payment collection conversations

Why it matters

Every declined payment creates unnecessary friction for both staff and patients.

CAU helps keep payments uninterrupted automatically, so your team spends less time chasing updates and more time focused on patient care.

Ready to enable CAU?

Fortis can help simplify payment management and keep revenue flowing smoothly.
